Presents on-Site Training

Managing Field Productivity to Improve the Bottom Line

Dr. Awad Hanna, Ph.D., P.E.

President, Hanna Consulting Group, Inc.
Professor, University of Wisconsin, Madison

Hanna Consulting offers customized, integrated packages of training products designed to meet and exceed customer needs on-site.

The specialty construction industry such as electrical & mechanical contractors is a high-risk and labor-intensive industry. Labor cost and labor productivity impose the highest risk to specialty contractors, even for small firms. Schedule compression, trade stacking and poor project preplanning undercut labor productivity. The end results of these problems are low profitability, reduced market share and diminished company reputation. This course will address many of the issues and new concepts necessary to successfully increase on-site labor productivity. As a result of taking this course, participants will know how to conduct a formal pre-planning, how to measure, control, and increase field productivity and how to solve problems and institute corrective actions.

Topics covered include:

- * *Basic and simple principles of field productivity improvement*
- * *How to conduct a formal pre-planning effort*
- * *How to build manpower loading chart and track labor productivity using planned versus actual manpower loading*
- * *How to recognize schedule compression and how to reduce its impact*
- * *Site logistics and material handling*
- * *Practical examples of good jobs versus bad jobs*
